PRODUCTION & COST REPORT

dog-20261013

Seedance generation breakdown | Prepared 16 October 2026

Production measure	Recorded total
Planned segments	55
Script scenes	12
API attempts	85
Completed video outputs	82
Final movie duration	17:00 (1,020 seconds)
Estimated Seedance cost	HK$ 6,747.84

Final movie

dog-20261013-1080p.mp4

Location: movies/dog-20261013/exports/dog-20261013-1080p.mp4

1920 x 1080 | 16:9 | 24 fps | Stereo audio | 55 selected segments

Generation settings

Model: Dreamina Seedance 2.5
Model ID: dreamina-seedance-2-5-260628
Resolution: 1080p (1920 x 1080), 16:9, across all attempts.
Segment durations: 10-30 seconds, as recorded per segment.

How to read this report

An **attempt** is one API submission. A **completed output** is a technically successful generation; it may still have needed a creative revision. The **selected file** is the clip used to assemble the delivered movie, including five local edits.

Costs include every recorded generation, including earlier takes. Total: US$ 865.11, converted at the reporting assumption **US$1 = HK$7.80**. These are ledger-based list-price estimates, not an inspected invoice. Discounts, tax, fees and actual settlement FX are unverified.

Segment breakdown | 01-28

All rows: Seedance 2.5 / 1080p / 16:9. Duration is the planned clip length in seconds. First OK is the attempt number that first produced a completed output.

Seg.	Scene	Sec.	API tries	Videos OK	First OK	Selected video file	Est. HKD

Succeeded means a file was generated; it does not imply final creative acceptance. Failed and rejected submissions have no output file. Local edits are listed separately and are not additional Seedance generations.

Accounting notes & file locations

API attempts per segment	Number of segments
1	28
2	24
3	3

52 segments produced their first completed video on attempt 1. Segments 14, 21 and 50 first completed on attempt 2. Segment 14 had a rejected submission; segments 21 and 50 had failed jobs. Further completed takes reflect revisions and final selection.

Completed generations total 1,518 requested seconds (25:18). All submissions, including the three unsuccessful ones, total 1,568 requested seconds (26:08). The final edit uses 1,020 seconds (17:00). Container padding is excluded from these duration totals.

Five selected files were edited locally

Seg.	Selected file, relative to movie folder	Source takes
39	`chapters/chapter_039/takes/edit_01.mp4`	take 03 video / take 01 audio
47	`exports/badge-correction/chapter_047_take_02_badge.mp4`	take 02 video / take 02 audio
48	`exports/badge-correction/chapter_048_take_02_badge.mp4`	take 02 video / take 02 audio
51	`exports/badge-correction/chapter_051_take_02_badge.mp4`	take 02 video / take 02 audio
54	`chapters/chapter_054/takes/edit_01.mp4`	take 02 video / take 02 audio

These edits did not add a Seedance generation charge. Segment 39 uses take 3 video with take 1 audio; the other four edited segments use take 2 as their source.

Cost method and source records

The saved ledger applies measured provider completion tokens x US$11.70 per million tokens for Seedance 2.5 / 1080p / image-only references. Its recorded USD total is **865.1079450**. The ledger records a zero estimate for the three unsuccessful attempts, citing the provider success-only billing policy. Pricing and that policy were recorded on 13-14 October 2026; no account invoice was inspected.

HKD = USD x 7.80. Total HK$ 6,747.84 is calculated before rounding. Individually rounded segment rows sum to HK$ 6,747.88; the HK$0.04 difference is rounding. No labor, local compute, asset storage, tax or payment charges are added.

Project snapshot: revision 36. Sources within the movie folder: project.json (plan, takes, selection); usage.json (attempts, tokens, estimated costs); exports/verification.json (delivered video checks). All registered video paths were checked to exist when preparing this report.

Movie folder: C:/Users/Admin 3/Downloads/codex-movie/movies/dog-20261013

Provider pricing source recorded in the ledger: BytePlus ModelArk model pricing.
